THE BASICS

VIVIPOS represents the latest in POS technology. In a class of its own, it is not simply the old story told a different way. With no moving parts (like mass storage drives), and an imbedded application sitting on a LINUX operating system, **VIVIPOS** does not require any further knowledge other than how to use and maintain the POS application.

A dedicated user manual prepared by the manufacturer, **FIRICH ENTERPRISES**, has a wealth of examples and is written in "plain English".
